Sanden Freon Compressor

Sanden International is the world's largest independent supplier of automotive freon compressors. The Sanden compressor model used by Freightliner has been tested over millions of miles and subjected to hundreds of thousands of hours of bench testing. Besides being very durable, it is lightweight and compact. Since the transition to R134a refrigerant, compressors must operate at much higher pressures than with R12 refrigerant. The Sanden compressor has an improved clutch bearing to handle these pressures. The model used by Freightliner has an environmental intrusion package to prevent dust and other intrusive material from collecting on the clutch armature and from potential penetration to the compressor shaft seal, thus improving longevity and reducing maintenance costs.

Benefits

- Tremendous durability
- Lightweight
- Compact, takes up less space in the engine compartment
- Reduced maintenance

Availability

All Freightliner models

Data Code

130-003 Sanden compact air conditioner compressor
