

ConMet Simplex® Fifth Wheels

Simplex fifth wheels are engineered for durability and simplicity. There are only 12 components and five moving parts to the fifth wheel, so there's less potential for cracking, wear and misalignment. The Simplex machined top plate provides a smoother flatter contact surface with the trailer deck plate, creating less friction and consistent load bearing distribution. This feature reduces wear and gives the driver a more solid feeling when cornering. Simplex fifth wheels are lighter and have greater vertical load capacities than comparable competitive fifth wheels.

There are two basic models of Simplex fifth wheels, the Simplex Lite with a vertical load capacity of 50,000 lbs. and the Simplex II with a vertical load capacity of 70,000 lbs.

Benefits

- Machined top plate reduces wear and increases fifth wheel life
- 50% fewer parts than competitive mechanisms, which reduces potential for cracking, wear and misalignment
- Lighter weight than the competition
- Very little maintenance necessary
- Fast and easy to replace parts when required

Availability

Simplex fifth wheel is standard on Century Class S/T, Columbia, Coronado, Argosy, Business Class, and FLD-SD

Data Code

Will vary with models and sizes
